

Rohan Pradhan

Data Analyst

London, UK | rohanprad09@gmail.com | linkedin.com/in/rohanprad | rohanprad.github.io

PROFESSIONAL PROFILE

Data Analyst with experience at Reiss and Starbucks EMEA, working with department heads and cross functional stakeholders to turn sales, stock and pricing data into clear, actionable recommendations. Builds and maintains Power BI dashboards, reconciles data down to root cause and automates reporting workflows. Combines strong SQL, Python and BI skills with an MSc in Artificial Intelligence, using AI tools such as Gemini, Copilot and Claude while keeping a critical eye on accuracy. Portfolio of end to end projects in Google BigQuery, Power BI and Python at rohanprad.github.io.

TECHNICAL SKILLS

Data Analysis: SQL, Excel, Google BigQuery, Alteryx, Python (Pandas, NumPy, Matplotlib, scikit-learn), R
Business Intelligence and Reporting: Power BI, DAX, Power Query (M), Power Pivot, Tableau
Automation and AI Tools: PowerShell, VBA, Batch scripting, Git and GitHub, Gemini, Copilot and Claude

PROFESSIONAL EXPERIENCE

Business Applications Support Analyst

Apr 2024 - Present

Reiss, London, UK

- Own the build, maintenance and enhancement of over 20 business critical reports, working directly with department heads to define requirements and ensure outputs meet their decision making needs.
- Designed and published Power BI dashboards to reconcile sales and stock units across platforms, tracing discrepancies back through source data to identify root cause and resolve recurring issues.
- Reduced SQL query execution time by 30 percent, improving data retrieval efficiency across daily and weekly reporting.
- Saved over 10 hours per week by automating recurring reports and notifications using PowerShell, VBA and Batch scripting, freeing up time for higher value analysis.
- Use Gemini and Copilot as part of day to day workflow to speed up SQL query drafting and PowerShell script development, checking outputs for accuracy before use.

Insights and Analytics Intern

Jun 2023 - Dec 2023

Starbucks EMEA, London, UK

- Published Power BI dashboards tracking key performance indicators to support market expansion decisions across EMEA, giving stakeholders self serve visibility of regional performance.
- Analysed product pricing and promotions in Excel to assess their relationship with sales volume, surfacing patterns that informed pricing decisions.
- Used R and RStudio to translate complex data into clear visualisations for non technical stakeholders, presenting findings to cross functional teams to inform tactical business decisions.

PROJECTS

Markdown Optimisation, H&M Sales Data | Google BigQuery, SQL, Power BI

- Analysed 31.8 million real H&M transactions in Google BigQuery to decide which slow selling lines to mark down and how deep, reconciling the raw data and detecting 19,668 past markdowns from price history.
- Found that 30 to 50 percent markdowns grew revenue by a median 45 percent against similar full price products, compared with 7 percent for shallower cuts, and built a Power BI dashboard recommending 2,122 lines for markdown.

Fraud Review Prioritisation, Payments Data | Google BigQuery, SQL, Python

- Analysed 590,000 card transactions in Google BigQuery to prioritise fraud reviews, building account level features and a points based risk score trained on four months and tested on two unseen months.
- Showed that ranking by expected loss (chance of fraud × amount) catches 47 percent of fraud value from 5 percent of reviews, five times more than the fraud count score.

EDUCATION

MSc in Artificial Intelligence

2022 - 2023

Royal Holloway, University of London

Relevant coursework: Data Analysis, Machine Learning, Experimental Design, applied in Python (Pandas, NumPy, scikit-learn).

BSc (Hons) in Computer Science

2018 - 2021

University of Delhi

Relevant coursework: Database Management Systems, Introduction to Data Science.
